

A Steps 1 and 2: 10,000 proposed correspondences (120 drawn); robust fitting keeps the 2,032 consistent with one transform (green) and rejects 7,968 (vermillion)

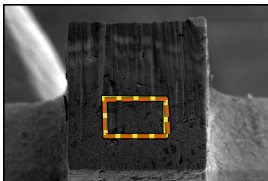

wide image: SEM, secondary electrons

narrow image, same points

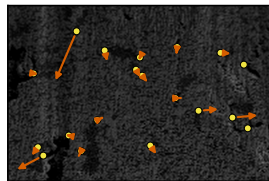

SEM, backscattered electrons

B Step 3: fitted outline (dashed) over the true one

C Step 4: miss at each annotated point (arrows drawn 5x longer)

D Step 5: the pair's error is the mean; under 10 pixels = registered
